

Profile

AI Software Engineer specializing in production-grade agentic systems and data retrieval platforms working as a forward deployed engineer for 9+ verticals at U.S. News & World Report. Expertise in Django backends, LangChain/LangGraph orchestration, vector store usage (OpenSearch/FAISS), and streaming APIs. Proven ability to ship reliable AI integrated products with industry grade guardrail infrastructure support (legal compliance), from site search to B2B data analysis agentic tool with real time graph and csv generations, performing in ambiguous environments with strong cross-functional collaboration across multiple verticals.

Experience

- AI Software Engineer

Aug 2024 – Present

U.S. News & World Report, New York

 - Architect ByteSage Django backend driving AI products with LangGraph agent workflows
 - Implement RAG pipelines using OpenSearch/FAISS for semantic retrieval with metadata filtering
 - Deploy streaming endpoints; harden reliability across dev/sandbox/UAT/prod environments
 - Build guardrails and conditional routing for production-safe agentic tool execution
- Software Engineer

May 2023 – May 2024

COAPS, Florida State University

 - Built Python/Airflow pipelines processing 1M+ marine data points into PostgreSQL (10+ TB)
 - Developed Django REST APIs serving 2M+ users with React/Plotly analytics dashboards
- Graduate Research Assistant

Aug 2022 – Apr 2023

Florida State University

 - Engineered PyTorch/TensorFlow models achieving 0.92 F1-score for anomaly detection
 - Reduced inference time 40% via custom CUDA kernels; boosted throughput 30% with GPU clustering
- DevOps Engineer

Jan 2021 – Dec 2021

ACS Pvt. Ltd, Mumbai

 - Maintained CI/CD pipelines (Jenkins, Docker, SonarQube); cut MTTR 80% with AWS CloudWatch
 - Automated infrastructure provisioning with Terraform, reducing deployment time by 60%
- Web Development Intern

Jun 2020 – Dec 2020

Cart Geek, Mumbai

 - Deployed ASP.NET Core apps on Azure/GCP with Traffic Manager load balancing
 - Implemented secure authentication flows and payment gateway integrations

Projects

- Portfolio AI Chatbot** (2024–Present): RAG assistant with Llama 3, Chroma vector DB, LangChain for conversational resume queries
- Transformer from Scratch** (Feb–Apr 2024): Built text completion model implementing self-attention; tracked perplexity dynamics
- Medical Image Segmentation** (Aug–Dec 2023): Polyp detection model (PyTorch/OpenCV) achieving 0.92 DSC, 0.86 JC
- YouTube AI Channel**: Live coding sessions on LLM systems (Llama 3, Mistral) and production workflows
- Agent IDE Mind Map**: Using Antigravity IDE’s reasoning logs to generate mind map for tracking the development process with AI agents and creating an abstraction layer to rollback and branch out approaches in a UI dashboard

Skills

- Languages:** Python, C/C++ (CUDA), Java, JavaScript/TypeScript, SQL
- AI/ML:** LangChain, LangGraph, PyTorch, TensorFlow, OpenCV, RAG, Vector Search
- Data/Infra:** Django, PostgreSQL, Airflow, OpenSearch, FAISS, Docker, AWS
- Tools:** Git, Jenkins, React, REST APIs, CloudWatch, SonarQube

Education

- Florida State University — M.S. Computer Science

May 2024

GPA: 3.8/4.0
- NMIMS University — B.Tech Information Technology

Aug 2022

GPA: 3.3/4.0

Certifications & Achievements

- Python Certified - Udemy
- Recognized Hyperparameter determination experiment for transformer [Attention is all you need] based text completion model
- Dean’s List: All semesters during M.S. program (2022-2024)

Impact Snapshot

Project / Impact	Tech Stack	Company & Date
Production AI workflows with tool orchestration and guardrails	Django, LangChain, LangGraph, DRF APIs	U.S. News (Present)
Improved system observability and reduced mean time to detect and report outages.	New Relic, Slackbots, ByteSage	U.S. News (Present)
Real-time analytics platform serving 200k+ users across 125 schools	Python, Airflow, PostgreSQL, Django REST, React	COAPS (2023–2024)
High-performance anomaly detection (40% speedup)	PyTorch, TensorFlow, CUDA kernels	FSU (2022–2023)
Automated CI/CD smoketests reducing deployment risk 80%	Jenkins, Docker, AWS EC2/S3, CloudWatch	ACS (2021)
